

Y-mouse[®] Keyboard and Mouse Adapter for USB on Sun Systems (OEM-83-ST)

- Connect your Sun System computer to your KVM
- Translates a Win+Alt key combination from a standard PS/2 keyboard (or KVM) to replicate the Sun STOP command.
- Use PS/2 input devices on Sun System
- Add our Sun X-keys (XD-84-SUN) to use all Sun Special keys from your KVM

The **Y-mouse Keyboard and Mouse Adapter for Sun Systems** works with any standard PS/2 mouse and keyboard or KVM connection. A special setting in our firmware translates the key combination of Win+Alt into the Sun USB STOP command. We have also created a special version of our X-keys PS/2 keypad which works with your PS/2 keyboard and this adapter to replicate the other Sun Special commands (Again, Props, Open, Copy, Mute, etc.).

The Y-mouse installs as a compound USB device using the operating system's built-in drivers for mouse and keyboard. The hardware buffers and transmits messages from both devices so they may work simultaneously.

Special settings for this adapter support different keyboard settings (see manual). A standard version of this adapter is also available (WHYM-0008) as is a version for high powered devices like bar code readers (OEM-35-HP).

Specifications

Hardware System	Sun MicroSystems with USB keyboard
Operating System	Sun
Sun Keys Supported	STOP (others available with Sun X-keys)
Connectors	One USB "A", two mini-DIN 6 pin sockets
Dimensions	4" x 2.5" x .75", 100 mm x 63 mm x 20 mm without cord
Weight	2 oz., 60 grams
Power Consumption	Low power USB device – less than 5 ma @ 5 vdc plus the power required by mouse and keyboard
Power Source	USB bus powered device
Nominal Voltage	5 vdc
Software	None required – HID compliant device
Certification	FCC class B, CE
