OK Here is the color template for Nuendo on the Xkeys controller . I programmed the set marker keys to the second layer under their respective go to key, so you can set the marker by pushing the shift key and the key for the marker you wish to set. I used two horizontal double keys for the stop and play buttons for the transport . I also set the nudge command in Nuendo to the "shift ," and "shift ." keys so that you can use the second layer for nudging a region with the shift key, and nudging the start or stop points of a region with the Ctrl or Alt keys respectively with the same nudge key. Hope you find this usefull .
